

VERTICAL ELEVATOR

The Vertical Elevator provides a very space-efficient solution for elevating potatoes. The potatoes are collected in a buffer hopper and the specially designed plastic belts with integrated lifters elevate the potatoes to the desired height. A chute arrangement designed for the next machine will ensure that potatoes are evenly fed forward. The Vertical Elevator belt speed can be adjusted to control the feeding rate to the next processing stage. Larger buffer hoppers can be supplied (optional).

**POTATO BUFFER TO
CREATE AN EVEN FEEDING**

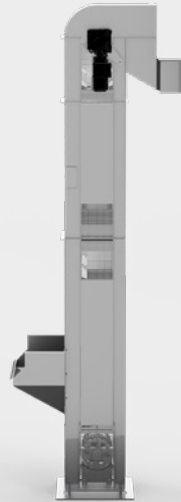

CERTICAL ELEVATOR ADVANTAGES

Adjustable belt speed

Potato buffer to create an
even feeding
