

# NUBBIN REMOVER

When cutting stripes, due to the form and shape of the potatoes, short pieces may appear. The vibratory shaker will remove these short pieces (nubbins). The unit can also be placed to separate short and long fries.

The specially designed vibratory VibR shaker is supplied with interchangeable screens placed in the shaker pan. The size of the openings of the screens sets the grading length that is requested by the processor.

The nubbins or shorter fries will be collected under the pan. Different collection arrangements can be offered for the separated nubbins or shorter length French fries.

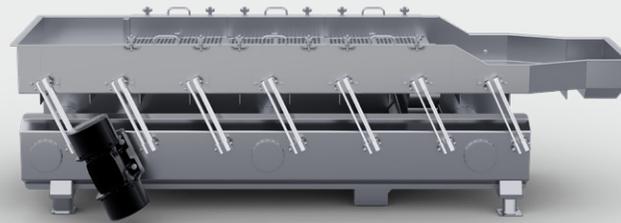

## NUBBIN REMOVER – LENGTH GRADER ADVANTAGES

Plastic leaf spring for quick start/stop

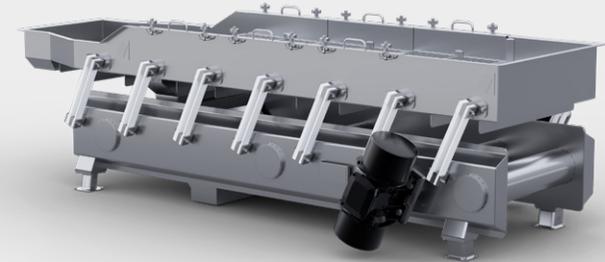

Perforated Screen for nubbin removal

Changeable screens for product flexibility
